

Manville Trust list of acceptable Medical Language for Pleural Disease

This list represents the most common language used in medical documents for the findings of pleural disease.

(X) = Needs Qualifier (Medical must indicate the process is related to asbestos.)

- (X) Apical Pleural Thickening
- (X) Blunting of the Costophrenic Angles
- Calcification of the pleura
- (X) Calcification of the lining of the lungs(s)
- Calcified diaphragmatic plaques
- Calcified pleural densities
- Calcified plaques
- Calcified pleura
- (X) Changes in/of the pleural
- (X) Changes of the lining of the lung
- (X) Chronic Asbestos-related effusion
- (X) Densities of the pleura
- Diaphragmatic scarring
- Diaphragmatic calcification
- Diaphragmatic pleural fibrosis
- Diaphragmatic plaques
- Diffuse pleural thickening
- Fibrotic changes of/in the pleura
- Fibrotic changes of the lung lining
- Fibrotic densities of the pleura
- Fibrotic pleural plaques
- Fibrotic calcification of the pleura
- (X) Pleural abnormalities
- (X) Pleural adhesions
- Pleural calcification
- (X) Pleural changes
- (X) Pleural effusions
- Pleural fibrosis
- (X) Pleural markings
- Pleural opacities
- Pleural plaque(s)
- Pleural scarring
- Pleural thickening
- Scarring of the pleura
- (X) Thickening of the Costophrenic Angles
